

AMENDMENTS TO THE CLAIMS

Claim 1 (currently amended)

1. Cosmetic or dermatological preparations, which are ~~finely dispersed~~ oil-in-water or water-in-oil ~~systems~~ Pickering emulsions, comprising
- (i) an oil phase,
 - (ii) an aqueous phase ,
 - (iii) amphiphilic boron nitride ~~which has both hydrophilic and lipophilic properties~~ and is dispersible both in water and in oil, and
 - (iv) at most 0.5% by weight of one or more emulsifiers.

Claim 2 (originally filed)

2. Preparations according to Claim 1, characterized in that they are emulsifier-free.

Claim 3 (originally filed)

3. Preparations according to Claim 1, characterized in that further cosmetic or pharmaceutical auxiliaries, additives and/or active ingredients are present.

Claim 4 (originally filed)

4. Preparations according to Claim 1, characterized in that the content of boron nitride is between 0.1% by weight and 30% by weight, based on the total weight of the preparations.

Claim 5 (currently amended)

5. Preparations according to Claim 1, characterized in that the average particle diameter of the amphiphilic boron nitride ~~particles~~ used is less than 20 μm .

Claim 6 (currently amended)

6. Preparations according to Claim 1, characterized in that, in addition to amphiphilic boron nitride, further pigments are present, which are selected from the group consisting of modified polysaccharides; microfine polymer particles; micronized, inorganic pigments; and mixtures thereof.

Claim 7 (original)

7. Preparations according to Claim 1, comprising one or more additives or active ingredients selected from the group consisting of antioxidants and/or UV protectants.

Claim 8 (original)

8. Preparations according to Claim 1, comprising one or more additives or active ingredients selected from the group consisting of astringents and/or antimicrobially effective substances and/or substances effective against acne.

Claim 9 (currently added)

9. Preparations according to Claim 5, characterized in that the average particle diameter of the amphiphilic boron nitride particles used is less than 15 μm .

Claim 10 (previously added)

10. Preparations according to Claim 6, characterized in that the micronized, inorganic pigments are amphiphilic metal oxides.

Claim 11 (previously added)

11. Preparations according to Claim 10, characterized in that the amphiphilic metal oxides are selected from the group consisting of titanium dioxide, zinc oxide, iron oxides or mixed iron oxides, silicon dioxide, silicates and mixtures thereof.
